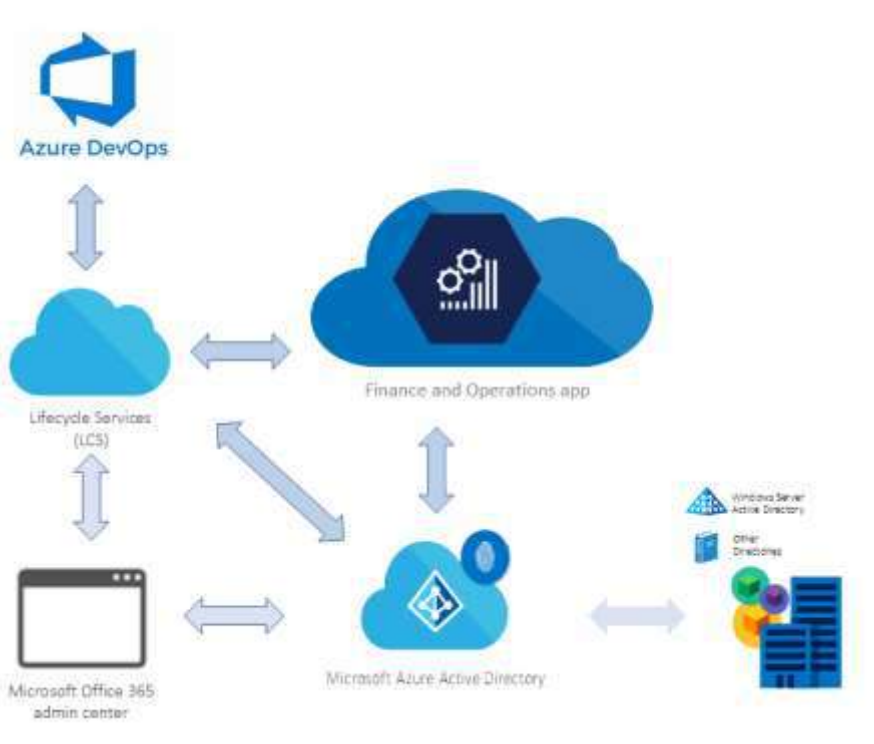
What is our value add? We beat offshore on quality & we beat onsite on price!

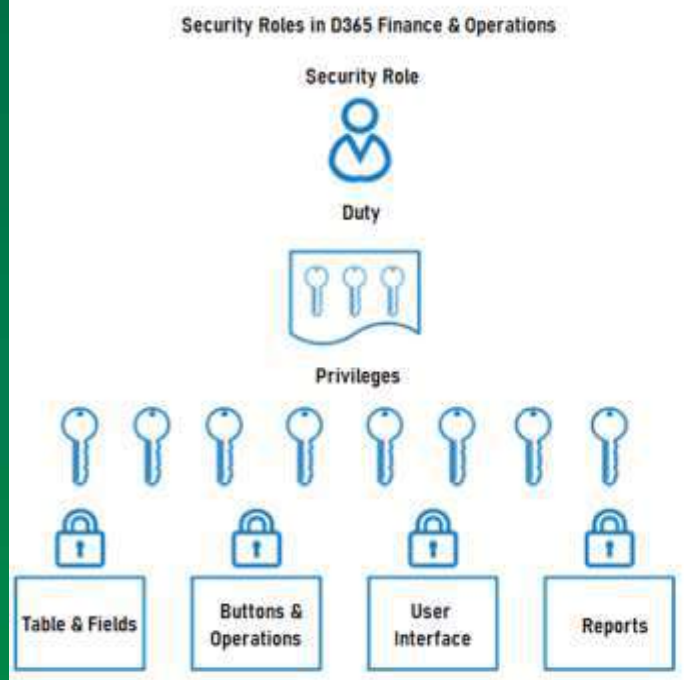
F&O Application Architecture

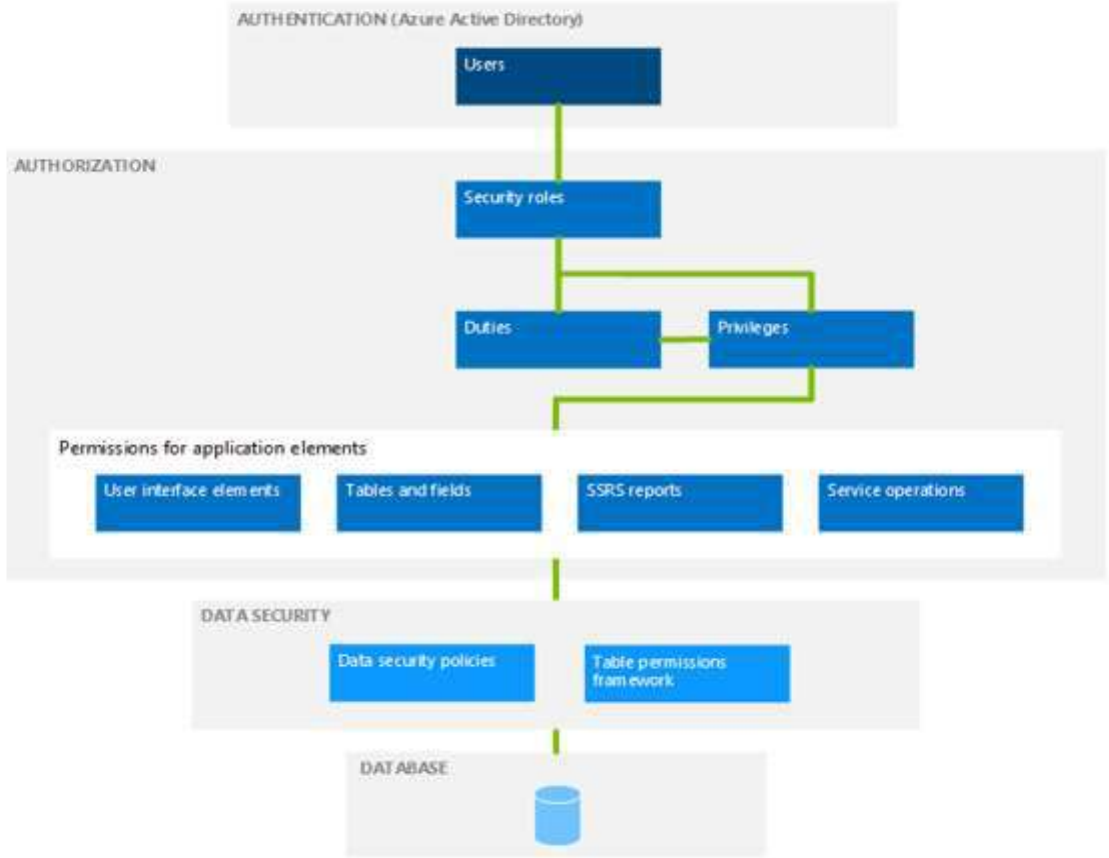


The cloud architecture consists of these conceptual areas:

- **Subscription** – A subscription to finance and operations apps gives you an online cloud environment (or multiple environments) and experience.
- **Licenses** – Customers must purchase subscription licenses (SLs) for Findoc, These apps are licensed through Microsoft Volume Licensing and the Microsoft Cloud Solution Provider (CSP) program.
- **Tenant** – In Microsoft Azure Active Directory (AAD), a tenant represents an Findoc.
- **Azure Active Directory (AAD)** – AAD is the multi-tenant, cloud-based directory and identity management service from Microsoft that combines core directory services, application access management, and identity protection in a single solution.
- **Microsoft 365 admin center** – Microsoft 365 admin center is the subscription management portal that Microsoft 365 provides for administrators. It's used to provide management functions for users (AAD) and subscriptions
- **Microsoft Dynamics Lifecycle Services (LCS)** – LCS is a collaboration portal that provides an environment and a set of regularly updated services that can help Findoc manage the application lifecycle of Findoc implementations. After Findoc purchase and activate a subscription for a finance and operations app, an **Implementation project** workspace is provisioned in LCS when the tenant administrator signs in for the first time.
- **Finance and operations apps** – finance and operations apps are deployed through LCS. Various topologies are available: development/test/build, acceptance test, performance test, and high-availability production.
- **Microsoft Azure DevOps** – Azure DevOps is used primarily for code version control, development, and to deploy a build environment. Azure DevOps is also used to track support incidents

Security Architecture of D 365 F&O





Authentication

- Microsoft Azure Active Directory (AAD) is a primary identity provider

Authorization

- Authorization is the control of access to finance and operations applications

Data security

- Authorization is used to grant role-based access to elements of the program.

Auditing

- User sign in and sign out is enabled, which means that the system logs when a user signs in or out of the application

SYSTEM SET UP IN D 365 F & O

Preparation & Blueprint Validation

- Identify project resources
- Review Project Charter and templates
- Identify the project risk register & determine the mitigation plan
- Project Kick-off
- Prepare Business Blueprint
- Provide Data Migration template
- Develop Core User Training Strategy
- Identify security roles

Realization

- Personalization and enhancement of Dynamics best practice solution based on blueprint
- Business Process Mapping
- Business Process revision
- Data Migration
- Integration Testing
- Training material & Plan
- Development of custom objects and interfaces
- Develop and test legacy data conversion programs
- Build Test cases with test plan – BPP's
- Update Test plan / cases

Final Preparation & Cut-Over

- User Acceptance Testing (UAT) - final integrated solution is tested and signed
- Cutover testing – Mock Go-live
- Train the core team – Train the Trainer Approach
- Customer training to the end users
- Finalize cut-over plans
- Conduct Go-Live check, cut-over

Go-Live & Support

- Provide production support during initial go-live
- Resolve critical business or technical issues
- Hand over support and system administration to AMS Support team
- Conduct project closing meeting
